Introduction

From transactions to decisions

Bright Coffee Shop operates three locations across New York City and processed nearly 150,000 transactions in the first half of 2023. A newly appointed CEO needs a clear, data-driven view of how the business is performing.

Purpose of this analysis

- Identify revenue drivers across categories and products.
- Pinpoint peak and slow trading periods.
- Surface high- and low-performing items.
- Recommend actions the CEO can take immediately.

WHY THIS MATTERS

Data turns raw sales into strategy.

- Smarter inventory & stocking.
- Staffing matched to demand.
- Targeted marketing in slow hours.
- Faster, evidence-based decisions.

Dataset Overview

The story in one paragraph.

149,116

Transactions

214,470

Items sold

R698,812

Total revenue

3

Store locations

Key fields used in the analysis

transaction_id / date / time

Unique sale events with timestamp.

product_category / type / detail

Coffee, Tea, Bakery, Chocolate, Beans.

Revenue = qty × unit_price

Computed revenue per transaction.

store_id, store_location

3 NYC stores — Astoria, Hell's Kitchen, Lower Manhattan.

transaction_qty, unit_price

Quantity sold and price per unit.

time_classification, day_name

Rush, Mid-Morning, Afternoon, Evening, Night.

Tools & Technologies

The stack that turned 149k rows into clear answers.

01

SQL

Querying & aggregation

Grouped transactions, computed revenue, built time buckets.

02

Databricks

ETL & processing

Cleaned unit prices, created 30-minute buckets, joined fields.

03

Excel

Pivots & validation

Cross-checked totals and built supporting pivot tables.

04

Power BI

Dashboards & visuals

Interactive KPI cards, trend lines and category breakdowns.

Sales Performance Overview

R698,812

Total revenue

149,116

Transactions

R4.69

Average sale

214,470

Items sold

Monthly revenue trend (Jan–Jun 2023)

Revenue by day of week

Sales by Product Category

TOP CATEGORIES

Coffee

R269,952

38.6%

Tea

R196,406

28.1%

Bakery

R82,316

11.8%

LOW PERFORMERS

Packaged Chocolate

R4,408

Flavours

R8,409

Loose Tea

R11,214

Sales by Time Intervals

Revenue by hour of day

Peak: 08:00 – 11:00

The morning rush drives about 36% of daily revenue.

Steady: 12:00 – 17:00

Afternoon traffic holds up — a chance to promote add-ons.

Slow: after 19:00

Sales drop sharply and 20:00 is almost zero.

High vs Low Performing Products

TOP 6 PRODUCTS — BY REVENUE

01	Sustainably Grown Organic Lg	R21,152
02	Dark Chocolate Lg	R21,006
03	Latte Rg	R19,112
04	Cappuccino Lg	R17,642
05	Morning Sunrise Chai Lg	R17,384
06	Latte	R17,258

BOTTOM 5 PRODUCTS — BY REVENUE

01	Dark Chocolate (single)	R755
02	Earl Grey	R1,271
03	Spicy Eye Opener Chai	R1,336
04	Guatemalan Sustainably Grown	R1,340
05	Lemon Grass	R1,360

Low performers are mostly single-serve teas — small basket size, narrow audience.

Key Insights & Findings

Six things the data is telling us — in plain English.

01

Coffee leads the menu

Coffee alone brings in R269,952 — about 38.6% of total revenue.

02

Mornings make the money

06:00–11:00 generates around 36% of daily sales. 10:00 is the peak hour.

03

Growth is accelerating

Revenue more than doubled from R81,678 in January to R166,486 in June.

04

Customers prefer large sizes

Most of the top sellers are large variants. People are happy to up-size.

05

Evenings are quiet

After 19:00 sales collapse. 20:00 brings in less than R5,000.

06

Stores are balanced

Astoria, Hell's Kitchen and Lower Manhattan each handle about a third of sales.

Recommendations

Six clear actions the CEO can take this quarter.

01

Stock the winners

Stock more large Coffee, Chai and Hot Chocolate ahead of the morning rush.

02

Staff the peak

Schedule extra baristas from 08:00–11:00 — this window earns over a third of revenue.

03

Activate the evenings

Launch a 17:00–19:00 Happy Hour on pastries and coffee bundles to lift evening sales.

04

Loyalty for regulars

Introduce a punch-card or app and reward 6 morning visits to lock in habit.

05

Trim the long tail

Phase out or rework bottom SKUs like Packaged Chocolate (R4,408) and Flavours (R8,409).

06

Test cross-store offers

Pilot location-specific promos across the three NYC stores and measure uplift.

Conclusion & Next Steps

The story in one paragraph

Bright Coffee Shop is a healthy, growing business driven by a small group of coffee and tea heroes sold mostly during the morning rush. Revenue is climbing steadily, performance is consistent across days and stores, and the biggest untapped opportunities sit in the evening daypart and in the long tail of underperforming SKUs.

Next steps

- Automate the daily sales report from Databricks to Power BI.
- Roll the dashboard out to all three store managers.
- Run the evening Happy Hour pilot for 4 weeks and re-measure.
- Layer in customer-level data to unlock loyalty analytics.

THE VALUE OF ANALYTICS

*Decisions,
not dashboards.*

Analytics turns 149,116 transactions into six clear actions the CEO can take this quarter — backed by evidence, repeatable every week and measurable in real rand revenue.

Thank You.
